

MEDIA RELEASE

Environmentally friendly sensor faucets in use for the first time

At the “Portal Churwalden” and at the mountain stations of the new panorama cable car “Heidbüel” in Swiss winter sports paradise Arosa Lenzerheide the first most environmentally friendly Swiss Eco Tap sensor faucets are used. This means enormous water and energy savings for the operators.

The award-winning water and energy saving faucets from Swiss company Swiss Eco Line AG are in use for the first time in a sensor operated version: At the mountain stations of the new panorama cable car “Heidbüel” and at the “Portal Churwalden” in the winter sports paradise Arosa Lenzerheide the sensor faucets were installed in the toilets and ensure big savings in water and energy consumption.

The most environmentally friendly Swiss Eco Tap faucets are already in use at home and abroad, but not as a sensor operated version. Rolf Senti, CEO of Swiss Eco Line AG is pleased that just in his home region the first sensor faucets ever were installed.

Rolf Senti: "Due to the economical faucets water consumption is reduced by 90 percent each when washing hands. In addition, the innovative spray technology makes a hot water supply redundant, the energy requirement for the usual hot water is completely eliminated."

The Swiss Eco Tap sensor faucet is now available at swissecoline.com.

The “Portal Churwalden” was designed by Ritter Schumacher Architects in Chur / Switzerland. Michael Schumacher is one of the investors of Swiss Eco Line AG.

Legend: Swiss Eco Tap sensor faucets at the mountain stations of the new panorama cable car Heidbüel as well as at the Portal Churwalden (Arosa Lenzerheide) reduce the water consumption by 90% and drop energy consumption to zero.

Chur / Switzerland, January 2016 / number of characters 1'433

Swiss Eco Line AG is a Swiss company located in Chur / Grisons. The Swiss Eco Line AG is supported by a team of investors from science, business, politics, engineers and architects, and is run by Rolf Senti with the aim to promote the innovation of water- and energy efficient products.
